

Payment Requirements - Student Workshop Handout

Order Booking Platform

Task: Use the requirements below to draw the following UML diagrams: **Use Case Diagram** | **Activity Diagram** | **Sequence Diagram** | **Class Diagram** | **Object Diagram** | **ER Diagram**

Payment Requirements to Fulfill

1. **Select Payment Method** – The customer must be able to choose a payment method (Card, UPI, Wallet, or Net Banking) at checkout.
2. **Validate Payment Details** – The system must validate the entered payment information before sending it for authorization.
3. **Authorize Transaction** – The system must send the payment request to a Payment Gateway/Bank and receive an approval or decline response.
4. **Update Order Status** – The system must confirm the order if payment succeeds, or mark it as failed if payment is declined.
5. **Generate Invoice & Notify** – On successful payment, the system must generate an invoice and send a confirmation notification to the customer.
6. **Handle Refunds** – The system must allow a customer to request a refund for a cancelled/failed order, and allow the Admin to approve or reject it.
